# Define MVP and user stories

As a customer, I want a tool to quickly browse recent reviews about a place.

# Translate user stories to a modular design

1. Browse and return tweets basing on the input location keyword.
2. Using google cloud analyze the sentiment of recent tweets.
3. Generate and return the rating result for the user.

# Who is your user?

Anyone who wants to get some reviews about a place.

# What are the basic user stories?

As a tourist, I want to see if this place is worth visiting and need to find some reviews.
As a shopkeeper, I want to see if my customers are satisfied with my service.
As a restaurant customer, I think the service/food is great and I want to post a tweet.
